

INDUSTRY

IT - Software & Services

GEOGRAPHIES

Dubai / US-based, with operations in over 20 countries

GDEV REQUIREMENTS

- Guaranteed Reliability
- Enterprise Security
- Online access for 500+ users
- Fully-scalable architecture

GDEV CHALLENGES

- Siloed customer data
- Multiple version systems
- Significant Downtime
- Security issues

CVSDUDE SOLUTION

- One hosted environment
- Fully secure solution
- 99.9% Uptime Guarantee
- Migration Support

RESULTS

- Millions saved per year
- 800 hours/month downtime eliminated
- One week migration

“ CVSDude has become the core of my business operations. ”

Rahul Subramaian, gDEV, Inc.

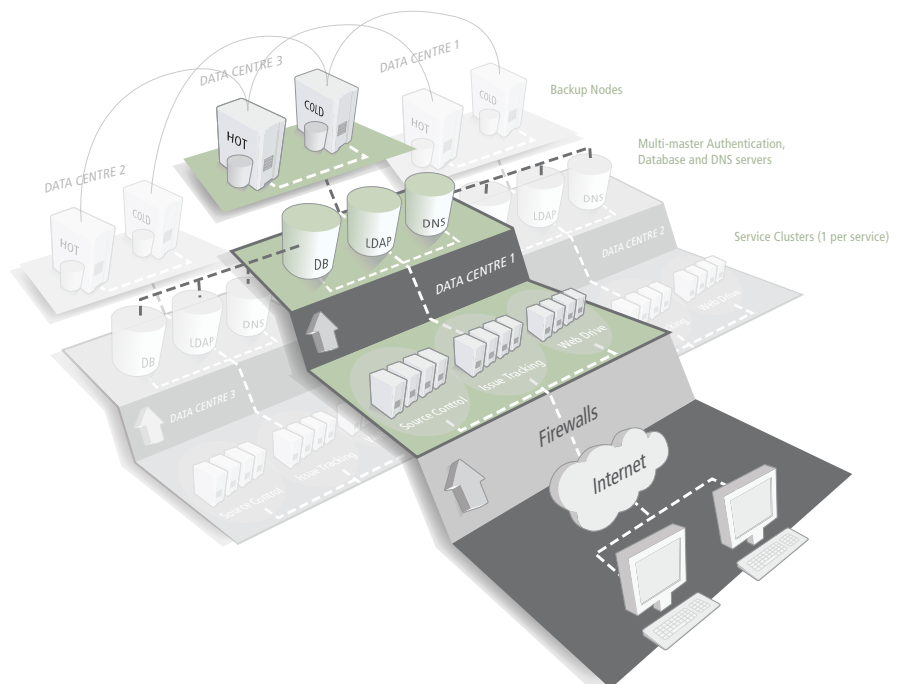

SUMMARY

MILLIONS SECURED THROUGH ONE WEEK MIGRATION

Trilogy, Inc. is a billion-dollar market leader that recently created a subsidiary – gDev, Inc. – delivering high-quality outsourced software development services to Fortune® 1000 companies worldwide.

Previously costly, inefficient, and insecure software development processes were consolidated onto CVSDude's on-demand platform. Through this decision, gDev saved more than \$825,000 per annum while improving their bottom line by millions of dollars.

Four full-time gDev administrators were freed up to perform other duties and new efficiencies were achieved company-wide. Previous network-wide virus attacks and recurrent downtime were eliminated.

The CVSDude Secure Environment supports global multi-site access and backup redundancy.

GDEV SUCCESS THROUGH CVSDUDE MIGRATION

Each week, gDev serves up to 300 client projects simultaneously - which requires managing changes made by more than 500 developers in dozens of partner companies working around the world.

- **Challenge 1:** gDev partners used incompatible software change management (SCM) systems spread across multiple infrastructures.
- **Challenge 2:** Outside authentication was domain-based and restricted to behind the corporate firewall, requiring VPN access.
- **Challenge 3:** gDev project managers lacked the fine-grained controls needed to manage client projects.
- **Challenge 4:** Lack of central security allowed a virus outbreak in 2007 to halt development for three days.
- **Challenge 5:** gDev's existing SCM systems required 4 full time MIS staff to maintain and led to downtime resulting in 800 lost developer hours per month.

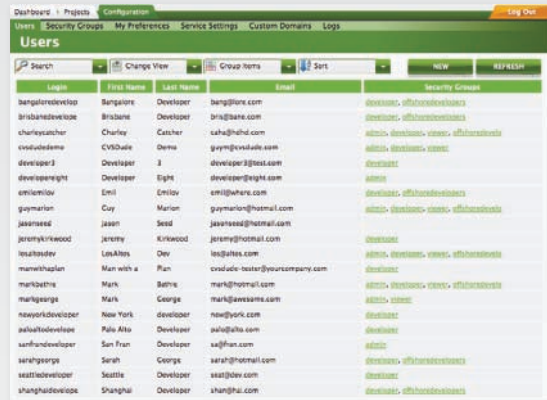

CVSDude Solution: A Secure On-Demand Platform

After a comprehensive evaluation, gDev selected CVSDude Enterprise Edition based on the following criteria:

- An on-demand source control and infrastructure solution, with all costs included in a low service fee.
- Guaranteed reliability of 99.9% system uptime.
- Secure online repositories where gDev's projects could be stored without fear of data loss or virus.
- A fine-grained permissions system allowing gDev administrators to grant access to online code repositories.

Easy Migration to CVSDude

After the successful evaluation of CVSDude Enterprise Edition, gDev made the decision to adopt CVSDude as its source control infrastructure for all mission-critical development. In a single week, the CVSDude migration team worked with gDev technicians to consolidate more than 75 code repositories into a dedicated CVSDude cluster. CVSDude offered branch and repository customization, ensuring complete integration for gDev.

Results Delivered by Implementing CVSDude Enterprise Edition

- \$825,000 in direct cost savings compared to gDev's legacy systems.
- More than 800 hours of developer time saved each month through CVSDude's 99.9% availability.
- Increased reliability freed up four full time administrators to focus on core competencies.
- Secure access for remote developers to commit code, collaborate, and delegate jobs online.
- Millions added to the bottom line, with faster project delivery times and satisfied repeat clients.
